EDUCATION

Western University

BESc, Electrical Engineering + Ivey HBA

London, ON

Expected Graduation: May 2028

WORK EXPERIENCE

Mechatronics Engineering Intern

Apr. 2026 – Aug. 2026

Visual Elements Manufacturing

Woodbridge, ON

- Built a **Python** CAD-to-CNC pipeline on the **SolidWorks API** that converted models into **woodWOP** programs and sent jobs to **HOMAG** CNCs over the network, improving workflow efficiency by 35%
- Interfaced with machine sensors and **PLC** controls, collecting CNC status, run-time, and error data into **Excel VBA** dashboards for production monitoring and scheduling, reducing production errors by 85%
- Modeled **SolidWorks** millwork fixtures for Lululemon, UGG, and Nordstrom and automated drawing exports and revision control with **Python** scripts, reviewing CNC output with engineers

Software Engineering Intern

Feb. 2026 – Apr. 2026

GreenVeil Packaging

Ottawa, ON

- Built a **Python** data pipeline that ingested pricing data from 5+ sources through **REST APIs** and normalized thousands of records into structured datasets, cutting manual data collection by over 80%
- Automated the ETL flow into multi-sheet **Excel** workbooks with monthly aggregations, standardizing multi-year pricing data for consistent reporting and trend analysis

Software Developer Intern

Dec. 2025 – Feb. 2026

ThinkThamizh

Toronto, ON

- Engineered 10+ pages and interactive **JavaScript** components on the organization's **Shopify** site with custom **HTML** and **CSS**, shipped on a scheduled release cycle
- Shipped user-facing **React** features for the event signup flow, improving usability and accessibility and increasing completed signups by 10%+
- Built AI-assisted content automation workflows with **ChatGPT**, **Claude**, and **Cursor** to streamline digital media production, cutting time to publish by over 60%

PROJECTS

Marq Living | Go, Python, TypeScript, Next.js, Supabase, TimescaleDB, MQTT, ESP32, C++

- Built a full-stack building platform for a student residence with a **Next.js** and **Supabase** tenant app for live shuttle tracking, targeted announcements, front desk tickets, and amenity booking
- Engineered **Go** services that stream **ESP32** current-sensor data over **MQTT** into **TimescaleDB** with sub-second latency, plus a rules engine that turns bookings and occupancy into lighting and HVAC control
- Developed **Python** models for 15-minute building load forecasting (under 10% MAPE), EV charge scheduling that cut simulated charging peaks by 20%+, and laundry machine state detection with 95%+ accuracy

Schematica | React, TypeScript, Rust, WebAssembly, Python, PyTorch, FastAPI, PostgreSQL, Docker

- Built a full-stack circuit analysis platform with **React**, **TypeScript**, and **FastAPI** that turns photos of hand-drawn schematics into interactive simulations with live node voltages, branch currents, and waveform plots
- Trained a YOLO-based object detection model in **PyTorch** with an **OpenCV** wire-tracing and OCR pipeline to identify components, read their values, and automatically generate SPICE-style netlists
- Engineered a **Rust** circuit solver using Modified Nodal Analysis for DC and transient analysis, compiled to **WebAssembly** for real-time simulation, with LLM-generated step-by-step explanations

DevAssist | Go, Python, TypeScript, FastAPI, React, PostgreSQL, Docker, Kafka, Redis

- Built a **Go** indexer that clones repositories, chunks functions with tree-sitter, and stores embeddings in **PostgreSQL** (pgvector) for semantic search, reusing unchanged chunks on each reindex
- Engineered a **Go** sandbox that validates each patch in a locked-down **Docker** container (no network, non-root) with tests, security scans, and static analysis, on a **FastAPI**, **Kafka**, and **Redis** backend

SKILLS

Languages: Python, Go, C, C++, Rust, Java, TypeScript, JavaScript, MATLAB, VBA

Frameworks & Tools: React, Next.js, FastAPI, PyTorch, Docker, PostgreSQL, TimescaleDB, Redis, MQTT, Git

Hardware & Manufacturing: ESP32, PLCs, Sensors, CNC (HOMAG), woodWOP, SolidWorks, OnShape
